

# STORY TOOLBOX

## Behavioral Interview Questions:

### ***1. Why do you want to be a data scientist/analyst?***

**Ans:** I have been working with data from the very beginning of my career. When I was a Software Developer, I created codes to improve user experience on our website, and also, to increase user login session time to keep them more engaged on the website built by my company. Then I stepped into the world of Supply Chain and Operations, where I made decisions mostly based on data. Now, in my current role too, I am working with data and using it to build and implement solutions and make more informed business decisions. So, I think that I am working with the most important section that fuels the industry in today's times, and that is data. So, that's why I want to be a data analyst to continue on this track and build better and robust solutions for the future as well.

### ***2. Why do you want to work at this company?***

**Ans:** I want to work at this company because its vision aligns with my beliefs and what I always wanted to work on, eventually. Also, I like the work culture and work that this company is doing by just using data. It is shaping many decisions and creating new opportunities for others to think about and work upon, so that it can make a positive impact on the business as well as enhance the knowledge base of many who are intrigued to know about it. Moreover, it works closely on the thing that I have worked for most of my career, and that is - data. By working for this company, I can make impactful decisions and changes and also enhance my learning experience.

### ***3. Tell me about a time you had to handle a conflict with your colleagues.***

**Ans:** When there is a team conflict or issue, I always try my best to step up as team leader if needed. I think my communication skills make me an effective leader and moderator. For instance, when I was leading a team on an IT project, two of the team members got embroiled in an argument, both arguing on the same thing concerning both. On individually discussing with them, I got to know that they were both dissatisfied with their workloads. So I arranged a team meeting where we reallocated all the assignments among the team members. This made everyone happier and increased their productivity, and our project was completed in time despite this issue.
